#### General

- Use P2 "standard" program for daily use.
- The dishwasher should only be used for laboratory glass
- The machine has a steam condenser to disinfect and dry the glassware at the end of a cycle
- Tall or heavy items should be placed towards the middle of the basket if possible to facilitate washing
- Make sure that nothing is blocking the arms and that they can turn freely
- Always wear gloves when unloading and loading the machine
- Unload the dishwasher when it has finished a program, do not use the dishwasher as a storage place
- Never use chemical products based on chlorides (bleaches, sodium hypochlorite, hydrochloric acid and so on)
- Residues of acids, particularly "hydrochloric acid", can damage steel. Acid residue in the glassware should be thoroughly rinsed from the glass before loading into the machine
- The machine uses automatic dosing, there is no need to load washing detergent
  - The chemical connected to dose1 is an alkaline cleaner, we use DES-1000 (blue container)
  - o The chemical connected to dose2 is a neutralizing agent, we use ASSA (white container)
  - o If the detergent level is low it will display a message of lack of product
- To open the door during a wash cycle, interrupt the cycle and remember that:
  - o The items inside the machine may be very hot, the machine reaches a temperature of 93°C
  - o The entire wash cycle must be repeated

### Reset procedure

In the event of a shutdown or when the stop key is presses with a cycle in progress, the door remains locked. To open the door the door release sequence must be carried out from the keyboard as follows:

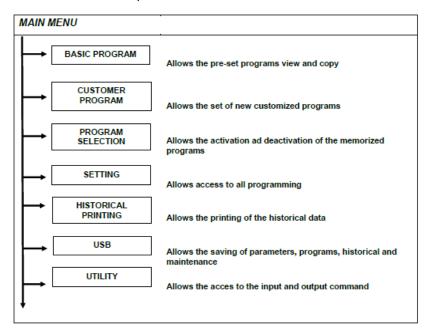

- 1. Press the STOP and START button together and keep pressed for 5sec
- 2. LCD display indicating switch procedure
- 3. Press the program P2 button followed by the program P1 button.
- 4. The machine is reset and returns to standby

| SWITCH  |             | DESCRIPTION   |  |  |  |  |  |  |
|---------|-------------|---|--|--|--|--|--|--|
| 3411011 |             | DESCRIPTION   |  |  |  |  |  |  |
| P1      | P1          | Select "SHORT" cycle.   |  |  |  |  |  |  |
| P2      | P2          | Select "STANDARD" cycle.  |  |  |  |  |  |  |
| P3      | РЗ          | Select "INTENSIVE" cycle.   |  |  |  |  |  |  |
| P+      |             | By pushing button <b>P+</b> you select other programs; each pressure corresponds to a new program.  |  |  |  |  |  |  |
| PRG     | P+<br>PRG   | Keep pressed for five seconds during Wait or Shutdown to display the Menu.  The programming menu access is reserved to specialized technician in possession of the password.  |  |  |  |  |  |  |
| START   | 0           | Select the program required and press the relative switch to start the cycle.   |  |  |  |  |  |  |
| STOP    | STOP        | This switch interrupts the cycle in progress, the card interrupts the process, displays a message indicating that disinfection did not take place, keeps the door locked and if necessary indicates a high temperature inside the chamber.  To return the machine to normal conditions the reset procedure must be carried out. |  |  |  |  |  |  |
| DRYING  | <u>\$\$</u> | It functions in machine equipped with drying. This switch allows the exclusion of drying forced phase from selected cycle.  |  |  |  |  |  |  |
| USB     | <b>∳</b>    | On the control panel board there is an USB port that allows the machine programming and data saving.  |  |  |  |  |  |  |

# <u>Menu</u>

To enter the menu keep the PRG key pressed for 5sec Press P1 and P2 buttons to scroll through the menu

Press START to confirm a selection and press STOP to exit the menu and return to Wait or Shutdown mode

### Periodic maintenance

- Fill salt
- Check drainpipes
- General state of washing chamber
- Refill detergent
- HEPA filter replacement (after 100hours ~100cycles)
- Cleaning of wash chamber drain filters (page73 user manual)
- Cleaning chamber thermostat probe (page74 user manual)
- Cleaning of wash rotors (page 75 user manual)
- Every week an anti-limescale treatment
- Cleaning of water inlet filters (page 77 user manual

## Anti-limescale treatment every week

- Use an incrustation removal product when necessary during a dry run (usually once a week unless the amount of water requires daily use to prevent lime build-up and clogging of the water jets).
- This product should be applied using 100 ml of incrustation remover poured into a container of the same size located on an empty basket.
- Run this program without the drying cycle active (de-activate drying by pressing the drying On/Off button)
